

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

cylindrica, Bull., *Lycogala epidendrum*, Buxb., *Dermodium conicum*, Pers.

B.—The portion without the fine net-work having a very wide-meshed net-work and with an irregular outline, *Siphoptychium Casparyi*, Rki., *Tubulina stipitata*, B. & Rav.

10.—Thickenings in the shape of a delicate, fine-meshed net-work covering about two-thirds of the surface, the remaining portion with scattered warts and ridges; the warted portion having the sharp, regular outline of a wide spindle, the ends of the spindle lying at the poles of the sphere, *Enteridium Rozeanum*, Rki.

11.—Thickenings in the shape of a delicate fine-meshed net-work covering about one-half of the surface, the remaining portion with scattered warts and ridges; the warted portion having a sharp, regular, circular outline, *Reticularia Lycoperdon*, Bull.

It will be seen from this series how readily the rather complex sculpturing of numbers 9, 10 and 11 might have had its origin from a simple warted type by the gradual coalescence of the warts in certain directions.

Note on Orthotricha.—MR. HAROLD WINGATE also remarked that in the Journal of Mycology for November, 1886, he had described a new genus of Myxomycetes under the name of *Orthotricha*. In some of the journals which noticed the article the genus was mentioned as *Orthotrichia*, and in Saccardo's Sylloge Fungorum, vol. vii, part i, this error was repeated. It is inferred that it was done in error as no mention is made of any intention to correct the original name. As the original name conflicted with that of a genus of mosses, the speaker had concluded to adopt the orthography as given in Saccardo :—*Orthotrichia* instead of *Orthotricha*.

JULY 16.

MR. CHARLES MORRIS in the chair.

Thirteen persons present.

The following papers were presented for publication :—

“Notes on the food of birds.” By Frank C. Baker.

“A review of the European and American Uranoscopidae or Star-Gazers.” By Philip H. Kirsch.

JULY 23.

MR. CHARLES MORRIS in the chair.

Seven persons present.
